Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Alex is learning about Java's functional interfaces and lambda expressions.

He wants to write a simple program that prints the square of each number in an array using a predefined functional interface.

Help Alex complete this task using the Consumer functional interface.

Input Format

- The first line contains an integer N, the number of elements in the array.
- The second line contains N space-separated integers.

Output Format

- Print the squares of all elements in the array, separated by a space.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 4

1 2 3 4

Output: 1 4 9 16

Answer

// You are using Java

import java.util.*;

import java.util.function.*;

```
public class Main {  
    public static void main(String[] args) {  
        Scanner sc = new Scanner(System.in);
```

```
        int N = sc.nextInt();
```

```
        int[] arr = new int[N];
```

```
        for (int i = 0; i < N; i++) {  
            arr[i] = sc.nextInt();  
        }
```

```
        // Define a Consumer functional interface using lambda expression  
        Consumer<Integer> printSquare = n -> System.out.print((n * n) + " ");
```

```
        // Apply the consumer for each element
```

```
        for (int num : arr) {  
            printSquare.accept(num);  
        }
```

```
    }  
}
```

Status : Correct
